

## **The basic way to backup data onto 2 Nexto drives is by using the Nexto "sync" function.**

Let's assume you are using the Video as the primary backup and want to make a 2nd backup onto the eXtreme

1. Copy the information from your memory card onto the Nexto Video by of inserting your memory card into the corresponding slot on the Nexto drive. (or direct connect via USB to the camera)
2. Using the menu click until you get to Power Off Time (PwrOFF) setting. DO a long press to change the default time to 30 seconds then do it one more long press to get to 60 seconds. Then one short click to next.
3. Take your USB cable and attach the mini-USB adapter to it. You then will have an USB cable with 2 mini ends
4. Scroll through the Video's menu until you get to "Sync". Do a long press on the button to select this option
5. Your will then be asked what direction you are moving data:  
From the Nexto to another storage device (**which is what we want**)  
From USB to Nexto (this is used when moving data between laptop and office etc)
6. Connect the USB cable to the Video's USB OTG connector
7. Choose Nexto -> USB and do a long press on the button
8. Turn on the eXtreme and connect the other end of the USB cable to it.
9. The eXtreme will show PC<-> USB. The video will show "sync Nexto?" A short press for will begin the data transfer. The screen will show when the transfer is complete and it is safe to disconnect the USB cable.
10. To verify data on the 2nd unit merely take the original CF card and place it in the proper slot on the eXtreme. Use the eXtreme's auto verify to double check the data integrity.
